Foreword

Tolga Yaveroğlu
Partner,

Deloitte Turkey
Technology, Media and
Telecommunications
(TMT) Industry Leader

Deloitte Technology, Media and Telecommunications practice is pleased to announce the 2014 winners of the Deloitte Technology Fast50 program where some of the most successful and upcoming technology companies in Turkey are ranked according to their top line performance over the last five years.

The Technology Fast50 program goes back to 1995 where it was first introduced in Silicon Valley. Today, the program is executed at over 37 regions around the world. It was launched in Turkey back in 2006 and over these last eight years we have had enormous success within the EMEA region where Turkish Fast50 winners were also ranked #1 among the EMEA Fast500 companies twice, in 2009 and 2011.

In the ninth year of the program in Turkey, Cordisnetwork tops our list with a growth of 4192%. Congratulations to Ms. Sarıgöllü and her team at Cordisnetwork. The company started its business in 1997 and differentiates itself showing a rapid growth among other firms in the sector.

Each year we also present the "Technology Special Award" to the fastest growing company among the Fast50 that managed to make the shortlist three times consecutively. I am happy to report that Natek Bilişim is the recipient of our Technology Special Award this year.

I trust you will find this year's winners inspirational as they continue to bring innovative and value added solutions to the market place. We are proud to have businesses like these being a Deloitte Technology Fast50 winner.

In addition to the list of our winners and an analysis of their growth performance, this report also presents the results of our Technology CEO Survey. Now with nine years of historical data, we believe that the survey results provide insightful perspectives and touch on key issues that the Turkish CEOs are dealing with.

We would also like to thank our partners MOBILSIAD, TBD, TBV, TESID, TTGV, TUBISAD and YASAD for their collaboration and support in making this program a success.

Congratulations to all the winning companies.

Welcome to Deloitte Technology Fast50 program;
local appreciation and global celebration of the
fast-growing technology companies in Turkey

Overview

Aslihan Erdem
Technology Fast50
Turkey Country
Coordinator

Welcome to 2014 Deloitte Technology Fast50 Turkey, the local appreciation of high growth technology companies and part of the global celebration of fast-growing technology companies. We are pleased to announce the winners of the Deloitte Technology Fast50 Turkey 2014, which recognizes the 50 most dynamic and fastest growing technology companies based on their revenue performance over the last five years. The overall winner this year is Cordisnetwork with a growth of 4192%. Kartaca places the second rank with the growth rate of 4075% in 2014 program, where the third winner is 3pay with 2125% growth. We are excited by the performance of the winning companies.

Most of the technology companies are from Istanbul and Ankara as in previous years. This year, we have one company from İzmir and another from Kocaeli. When we analyze the profiles of the winning companies, 62 percent of them are in software business, whereas 16 percent are in telecommunications/networking and 14 percent are in internet sub-sector. These technology companies, which give importance to research and development activities, achieved an average growth of 843 percent this year.

We conducted a survey with the fast-growing technology company CEOs, asking their growth strategy and future expectations. The survey also reveals CEOs personal challenges and threats that technology industry is facing.

55% of the CEOs feel optimistic about the economy in the next 12 months, while 45% believes it will stay stable or shrink. This is reflected on the confidence levels of the CEOs in terms of sustaining their companies' growth levels, as this year there is a slight decrease in the confidence levels from 88% in 2013 to 74% in 2014 (those indicating extremely confident + very confident),

Majority of the company CEOs foresee that organic growth will be the main source of growth in the next 12-month outlook.

Also, having good business strategies and high quality employees are seen as the top two factors to success among the Fast50 companies in the technology sector. Developing leaders and delegating responsibility remains as the most important personal challenge as a CEO for the last 3 years.

The impressive success of Turkish companies excites us and we are honored to have them in our Deloitte Technology Fast50 program. Congratulations to our 2014 winners, and we wish to see their achievements continue in the future through creating powerful connections.

Technology Fast50 Turkey Program

The program celebrates Turkey's fast-growing high-technology companies. The awards identify the trends that are shaping the technology, media and telecommunications sectors today. Based on revenue growth percentage over a five year period, the program includes companies from all related industry sub-sectors:

- Software
- Telecommunications/networking
- Internet
- Computer/peripherals
- Media/entertainment

To be eligible for Deloitte Technology Fast50 Program, companies must meet the following criteria:

- to be in business for a minimum of five years
 - develops proprietary technology that contributes to a significant portion of the company's operating revenues
 - manufactures a technology-related product
 - devotes a significant effort to research and development about technology

Deloitte Technology Fast50 is a program that recognizes and profiles fast-growing technology companies

- to be in business for a minimum of five years
- whose parent company must be Turkish owned and headquartered in Turkey
- whose operating revenues must be at least 50,000 Euros for 2009 and 800,000 Euros in 2013.

Deloitte Technology Fast50 Program is part of Deloitte's Global Fast500 program which runs simultaneously in countries such as USA, Canada, United Kingdom, France, Norway, Sweden, The Netherlands, Germany, Central Europe, Israel, South Africa, China, Australia, Hong Kong, India, Japan, Korea, Malaysia, New Zealand, Singapore, Taiwan, Thailand, South Korea and Finland.

The benefits of participating at Technology Fast50 program

Technology Fast50 winners receive exposure and recognition upon release of the rankings from both the media and business communities. The benefits are significant:

- Networking opportunity with other fast-growing Turkish technology companies and business organizations at our awards ceremony
- Networking opportunity with other fast-growth technology companies and business organizations from around the world through Deloitte Technology Fast500 EMEA Program.
- Access to leading edge industry research and commentary
- Recognition from the business and financial communities
- Benchmarking opportunity with similar companies
- Increased attention from the business and investment communities
- Media coverage

Technology Fast50 Turkey 2014 Partners

Established in 2009 with 24 members and comprising the representatives of the value-added mobile services sector, MOBİLSİAD (Mobile Service Provider Businessmen's Association) was founded to develop solidarity and cooperation between mobile service providers who offer value-added products, services and technologies over a "mobile technology platform" in communication, IT and media sectors.

MOBİLSİAD aims to increase the service quality and efficiency of the sector, setting sector-specific codes of conduct and making them functional among members, thus enabling the sector to operate under conditions of competition, looking for solutions to eliminate the problems experienced at national and international levels in line with the common interests of the sector companies. The Association facilitates globalization and competition of the sector players in foreign markets by strengthening the perception of the industry in national and international markets, and developing relations with regulatory public bodies and operators to ensure sectoral growth. To this end, MOBİLSİAD carries out several projects to notify and guide people, and acts as a non-governmental organization with the goals of raising the awareness of leading sector players and end users.

Informatics Associations of Turkey (IAT) has been established in 1971 and currently have reached to five thousand members. IAT which is the oldest ICT association, is also the only institution in Turkey, which intends to embrace all information systems professionals as well as those other professionals who benefit from and associate themselves with information systems in any manner when performing their respective professions. The principal goal of IAT is to help the advancement of theory and practice of computer science and related sciences and technologies in Turkey and to promote widespread utilization of information systems in the country in order to reach to the ideals of information society.

Aiming at “a Turkey that is transformed to information society”, TBV, continuously works for accelerating the process of transforming Turkey into an information society. TBV also continues informing and making all the sections of the public conscious for disseminating the ICT culture to everyone, for increasing the computer literacy, and for providing the necessary infrastructure for information to be freely moved and shared. It is also aimed that the share of ICT investments in the general economy will reach the average EU member countries’ and needed information and communication technologies support will be provided for restructuring the government.

Working for promoting usage of international quality standards and software development methodologies and tools along software producing companies, TBV also supports the establishment of techno parks in order to encourage R&D activities in the ICT sector besides creating models for academy-industry cooperation.

TESİD (Turkish Electronic Industrialists Association) has completed its establishment in 1989 by 24 founder members upon the incitement of the authorities of the Ministry of Industry and Trade by the Representatives of Electronic Industry companies, Universities. Presently, TESİD has 158 members belonging 90 different industrial companies and its membership is open to all companies working in the field of electronic industry, information technologies and related service sector who produce good and/or implement R&D in Turkey.

The Electronic Industries in Turkey are organized in an independent association in order to deal with the common interests of the individual companies. It is our wish to develop TESİD into an organization which is perceived as; reliable, innovative, independent, continuous, liberal and participative by its members and the community.

Supporting R&D and technological innovation projects of the private sector in Turkey since 1991, TIGV (Technology Development Foundation of Turkey) is a successful example that Turkey introduced in Europe; an innovative and dynamic intermediary mentioned in EU Lisbon Communiqué as an organization required to reach public R&D support to private sector. TIGV provides long-term credit that is repaid by the companies and that requires compulsory contribution of the companies to all costs incurred in the project. By this way, the public funds are directed to R&D projects more effectively through the "multiplier effect" of the revolving fund.

YASAD (Yazılım Sanayicileri Derneği or Software Industrialists Association) is a non-governmental organization representing the software sector in Turkey. It comprises most of the local software producers, including the leading ones.

The association endeavors to help the Turkish software sector attain a world-class development level. Its mission is to place Turkey in the list of major global players who export software and related high value-added technological products, and continuously improve its position, converting the sector into one of the driving forces of the Turkish economy.

YASAD undertakes activities to create public awareness regarding the strategic importance of the software sector for Turkey, stressing its potential in exports with high value added, role in national security, economic growth, welfare and reduction of unemployment rates, and explaining the capabilities of the national software sector.

Fast Facts

Fast50 Winners Geographical Distribution

Istanbul continues to have the highest number of fastest growth companies (40), while 8 of the winners are from Ankara and two other winners from Kocaeli and Izmir.

Fast50 Industry Segmentation

The software companies take the lead among the Fast50 winner companies with 62 percent again this year. Telecommunications/network companies' represent 16 percent and the share of internet companies remains at a percentage of 14.

Research and Development

While majority of the companies spend €500K or less on research and development, the number of Fast50 companies that spend €1M or more has reached the highest number over the last 4 years with 15 companies.

Growth Rate

Number of companies with growth rates of over 1000% over the past 4 years has increased and more than doubled to 28%. Number of companies which show growth rates of 100-250% has substantially decreased from 46% in 2013 to 6% in 2014. Overall, companies' average growth rates seem to have increased over the last two years.

Revenue Levels

In 2014, the revenue breakdown of the companies that applied for the program remains almost the same in the last two years. 66% of the winning companies had annual revenues of €5M or less and 22% of the companies have more than €10M in revenues.

Technology Special Award

“Deloitte Technology Special Award” is presented to the fastest growing company among Fast50 Turkey companies that managed to make the shortlist 3 times consecutively.

Company Profile

NATEK is the market leader in Security Management solutions in Turkey. NATEK is one of the few companies in Turkey, which has become a market leader in an IT segment where strong non-Turkish products exist. NATEK deployed its software products in more than 150 enterprises and sold over 300.000 licenses since 2005. NATEK currently develops software solutions for security incident event management (NATEK SIEM), Network Access Control (NATEK NAC), mobile device management (NATEK MDM), Videoconferencing (NATEK IVME), Data Leakage Prevention (NATEK DLP), Network & Systems Management (NATEK NSM) and other fields of IT management.

Currently, NATEK Security & Management Products dominate 90 percent of the public industry and more than 50% of the Turkish market.

9. BuldumBuldum.com

BuldumBuldum.com (Orbital Teknoloji AŞ) is the largest gift and customized product e-commerce website in Turkey. It is founded in 2007 and grew more than %1300 times from 2009 to 2013.

Since the company is in the gifting business, delivery time is crucial. This is why BuldumBuldum.com developed its own website and warehouse automation technology in order to ship more than 10.000 products on the same day. BuldumBuldum.com is the largest customization brand in Turkey. It has its own design engine technology which makes users create their own products easily from the website. The warehouse automation technology creates unique barcodes for each customized product which enables the company to track each product in the production steps and deliver to each customer correctly.

BuldumBuldum.com has its own developed technology in order to get the orders from its website and process it in the warehouse as fast as it can. Every shipment is handled by portable terminals and managed by own developed real time software automatically. The product pick ups optimized by "Shortest Path Algorithms" enables warehouse workers to pick up the products with the best and shortest ways in the warehouse in order to deliver the orders in the shortest time. BuldumBuldum.com also developed its own design engine technology which allows its customers create their own customized products easily by themselves at BuldumBuldum.com's website.

| Address | Kardeşler Sok No 61A Esentepe Mah. 34394 Şişli, İstanbul |
| Web Address | www.webdenal.com |

WebdenAl.com is serving as an e-tail company since 2004 covering more than 100.000 products under 17 different categories. WebdenAl has developed its own e-commerce software over the years providing great flexibility and ease of adaptation to changing conditions. In-house developed WebdenAl's e-commerce software covers, requirements as such:

- It enables to process vast product data, sourced from different suppliers in various formats. While some suppliers provide XML product sheets, others may use web services or just give Excel documents in different formats. The software detects identical products and prepares a single ID for the users, comparing stock availability and prices from different suppliers.
- The software developed into an Order Management System (OMS), so that whenever an order is received it is directed to the correct supplier.
- Within the system there is also integrated fraud detection inline with PAYU system. This prevents order delays.
- All questions from customers via email, web forms or phone are handled by CRM within the system which carries an inbound ticketing system.
- System is fully integrated with accounting software that enables each and every order trackable by finance department. Invoices are printed automatically and the data is sent to the accounting software.
- Once the packages are ready for shipment. Shipment data is sent to the cargo companies through their web service system so that the shipments can be tracked and efficiently delivered.
- Office communication is also handled within the system so that the operators can give an accurate information to customers and the communication in between can be documented.

| Web Address | www.cardtek.com |

SmartSoft, founded in 2001 in İstanbul, is the first company of the Group, established during the transition period of magnetic stripe cards to CHIP & PIN cards, providing software solutions to the Turkish banking sector.

SmartSoft, is primarily speacialized in EMV (Europay – MasterCard – Visa) standards, which have started to be applied in 2004 in Turkey and used for smart cards software. Between 2001-2006 SmartSoft continued to offer innovative solutions for the chip card industry. In 2006, SmartSoft proved its success in the field with the first projects completed in card payment systems as well, both in Turkey and abroad.

SmartSoft soon became the sector’s leading company with its proactive approach, specialized staff, R&D investments, technical design capabilities and synergic organization, providing innovative and high quality products. In 2007, SmartSoft developed the company structure to meet the global standards and grow the company reach, especially by extending the international operations. As a company based in Turkey with local capital, SmartSoft shortly grew to be an international company by adding new successful projects to its portfolio.

P.I.Works provides umbrella mobile network performance monitoring and optimization solutions. These solutions help to improve the performance of mobile networks. The results are lower costs, getting the most from existing capital expenditures, and improved subscriber experience. The company was founded in 2005. The company's products are:

- P.I.Web: Umbrella performance monitoring and reporting
- P.I.ANO: Radio Access network root-cause problem analysis and optimization
- P.I.SON centralized Radio Access Network Optimization to automatically improve complex, heterogeneous networks

Radore was established in 2004 with the aim of developing individual and corporate "web hosting" services. The company made its first data center investment in 2005 in order to create unique, flexible and advanced solutions to meet high capacity requirements emerging as a result of increasing internet activity levels and fast-developing new generation internet infrastructure. In time, Radore became Turkey's one of the most efficient and high-capacity private data centers.

According to "Deloitte Technology Fast50 Program 2012 and 2013" rankings, Radore is the fastest growing data center in Turkey and Turkey's one of the 10 fastest growing technology company for the last two years.

Today, Radore offers data center solutions to more than 2,000 individuals and corporations with almost 40 professionals at its data center with a capacity of 10,000 servers.

Radore was awarded with the Microsoft Certified Partner title in 2007, Brocade Premier Partner title in 2011 and Dell Registered Partner title in 2012.

Smartis Interactive, which has been established in 2000 in Istanbul, provides 360 Degree Digital Brand Communication services in 4 fundamental subject: Design, Software, Social Media Management and Technology Development.

The company believes, creativity is the essence of change and if integrated with functionality, it is what companies need for their brand value and successful marketing operations. Smartis is different at its approach to customers, which is being with the customer instead of working for the customer. The company does this by using analytical methods, where they measure everything and examine the consequences in CRM manner. That is why the company calls themselves as Digital Engineers who bring art and numbers together.

The company's main principle is developing boutique services to its customers for long intervals rather than providing same product to many customers, which results in consistent revenues and longterm cooperation.

Tabim Bilgisayar Pazarlama Tic. Ltd Şti (TABİM) of Ankara, Turkey was established as a Private Software Company in 1991. The Company provides Software and Infrastructure Solutions. It also has two Research and Development offices in Cyberpark Plaza; one is Software Department, and other is Support Department, similar like Silicon Valley, USA. The Company has been in service with 20 years of experience and knowledge in IT Technology Sector. TABİM Software which adds experience and background into its service quality has sustainable development and growth; it is also the first local company in National IT Market. The Company provides services of Research and Development, Software, Production, Training and Support Services, Project Management and Consulting in fields of IT Technology.

VECTOR Barkod ve Bilgi Teknolojileri A.Ş. is one of the leading information technologies, software, hardware and services company of Turkey (Top 500 in Informatics) in the field of AIDC (Automatic Identification and Data Capture).

Electronic messaging, Internet and GSM technologies have become indispensable parts of our daily lives. Together with the improvement and development of these technologies day by day, physical borders have completely vanished. Your competitors who seemed to be very far away from you a few years ago are now just next to you. Prices of products and services are decreasing day by day due to the increase in competition. The companies wishing to survive in this competitive climate are obliged to decrease their costs in order to ensure customer satisfaction and sustainability, and also become distinct by optimizing their operations.

Technology Fast50 Turkey 2014 CEO Survey

Introduction

Deloitte Technology Fast50 Turkey 2014 CEO Survey is based on the responses received from the CEOs of the fast-growing technology companies that are ranked in Technology Fast50 Turkey 2014 program.

The survey is an online survey that was conducted during September 2014 and completed by over 80 percent of the CEOs that are listed in our 2014 Technology Fast50 program.

The survey aims to understand how Turkish CEOs feel about their companies' future, the types of operational challenges they face and the potential markets that provide the best opportunities for their companies' growth. We also focus on understanding their personal challenges as well as the important skills required to serve as a CEO of a technology company in this dynamic sector.

Responses to some questions are compared to previous years' survey results, in order to see how Turkish CEOs' perspectives on growth, challenges and expectations have changed over years.

We hope that the Deloitte Technology Fast50 CEO Survey provides valuable insights into the issues that today's leading Technology CEOs cope with in driving the industry forward in 2014 and beyond.

Growth Expectations

Q1a What are your expectations with regards to the economy over the next 12 months?

Q1b How confident are you that your company will sustain its high level of growth rate over the next 12 months?

55% of the CEOs believe that the economy will grow in the next 12 months, while 45% believes it will stay stable or shrink. This is reflected on the confidence levels of the CEOs with regards to their companies' growth levels, as after two years of increase in the confidence levels (extremely confident + very confident), there is a decrease in the confidence levels from 88% in 2013 to 74% in 2014.

Q2 What do you consider the most likely scenario for your company within the next 12 months?

Most of the companies expect that organic growth will be the main source of growth over the next 12 months. Merger with a strategic partner although increased two points, has lost its second position in 2012 and ranked in the third place in 2014. The second most likely scenario is receiving funding from VC or Private Equities same as 2013, since M&A deals in Turkey in 2013 in technology, media and telecommunication sectors (internet, media, telecom, technology, e-commerce) reached a total value of around US\$833 million (disclosed deals only) with 40 transactions (including non-disclosed deals)¹. Raising funding through IPO is a much less likely scenario for the companies compared to last year, whereas more companies see acquiring a company a more likely scenario.

¹ Deloitte Annual Turkish M&A Review 2013

Secret of Success

Q3 Which factor has contributed most to the growth of your company?

In 2014, having a sound business strategy takes the first place that contributes most to the growth of the technology companies with 26% of the CEOs agreeing with it. Sound business strategy takes over the place of high quality employees and this may be due to the importance of having a solid strategy in turbulent times to better manage risk. Right timing still keeps its importance as the third most significant contributor.

Q4 What is your biggest operational challenge in managing your company's rapid growth?

“Finding, hiring and retaining qualified employees” and “developing a strong sales and marketing strategy” remain as the top two operational challenges among technology companies in managing their companies’ rapid growth this year as well as last year.

Q5 What is your biggest financial challenge?

Growing sales remains as the biggest financial challenge for fast-growing technology companies. In 2014, nearly half of the respondents continue to indicate that growing sales is the most important challenge for them whereas raising capital has become a more significant financial challenge compared to last year for some of the respondents.

Q6

**Which of the following geographic markets do you currently do business in apart from Turkey?
(Please select all that apply)**

Which of the following geographic markets represent the best opportunity for significant growth for your company over the next five years?

The top 3 regions in terms of future business potential remains similar to the current geographic spread of companies, with Middle East and Africa having the highest potential for business expansion. North America, on the other hand, is expected to share the third place with Western Europe as the third most attractive region in terms of business potential even though only 7 percent of the companies are currently doing business in North America.

Q7 How much will your workforce grow in the next 12 months?

Only 7.2% of the CEOs believe that their workforce will grow more than 50% in the next 12 months compared to the 17% last year. This is most likely due to their conservative expectations with regards to economic growth in the next 12 months as well as the decrease in their confidence levels with regards to sustaining business growth. With that being said, 88 percent of the surveyed CEOs in Fast50 Turkey Program still believe that their workforce will grow at a equal to or less than 50% rate and only 5 percent of the CEOs indicated that they do not expect any growth in their workforce.

Q8 What is the biggest threat to growth in the technology sector over the next 12 months?

Similar to CEOs' belief that finding, hiring and retaining qualified employees is the biggest operational challenge in managing their companies' rapid growth, every 1 out of 3 CEOs claimed that availability of talent is also the biggest threat to growth. On the other hand, 1 in every 5 CEOs indicated "rising costs" as the second biggest threat to growth in the technology industry.

Q9 If you could prescribe only one thing, what would you prescribe to stimulate growth in the technology sector in the next 12 months?

Although almost 40% of the respondents still indicate “Investment in R&D and Innovation” as the key stimulator for growth in the technology sector, its significance has decreased from 50% to 37% from 2013 to 2014. 1 in almost 5 CEOs indicated that training and education is critical to stimulate growth, which is much higher compared to last year. Also, this year CEOs claimed that lower taxes would also help the companies for growth in the next 12 months.

Q10 What is your most important personal challenge as a CEO?

“Developing leaders and delegating responsibility” has kept its position as the most important personal challenge as a CEO for the past 3 years. This is in line with the results of Deloitte’s 2014 Global Human Capital Trends Survey where developing leaders at all levels and across different functions was identified as the most urgent issue amongst the business and HR leaders surveyed. “Achieving and sustaining profitability” gains importance over the last two years amongst the CEOs’ personal challenges almost doubling since 2013. Also, CEOs become more comfortable with managing risks, raising capital and identifying strategic partners this year compared to the last two years.

Q11

Please select the primary customer segment that you currently target.

Please select the customer segment that you plan on primarily targeting over the next 5 years.

Majority of the technology companies indicated that domestic “Large Corporate Accounts” are their primary customer target today followed by the small and medium sized enterprises. However, over the next 5 years, the number of companies primarily focusing on international markets is expected to increase from 2% to almost 40% as companies seek to expand their businesses globally.

Q12 Please indicate the top three trends that will drive technology investments in the next three years. (Please select all that apply)

We were also curious about the top three trends that will drive technology investments in the coming years. “Digitization and mobility” is seen to be the top trend that will drive technology investments according to the CEOs in the next three years. With the increase of penetration of the Internet, more and more companies are looking to invest in mobile technologies to ensure a connected business environment with 24/7 access to information as well as conduct work no matter where someone is located through mobile devices. “Better use of data through analytics” is also another important trend that will drive investments. As the costs of collecting and analyzing data decreases, more and more companies are investing in the necessary systems to store data from various sources such as customer interactions to have a 360 view of the customers as well as operations for data driven decision making in order to increase efficiencies. Transparency and visibility is indicated as the top third trend to drive technology investments, as the need for transparency throughout the supply chain continues with companies wanting to backtrack each product produced to identify rootcauses of any problems, have detailed product information or locate any product while in transition.

Q13 Please rank the top 3 primary sectors in terms of current business potential for your company.

Q14 Please rank the top 3 primary sectors in terms of business potential for your company in the next five years.

“Technology, Media and Telecommunication” sector remains as the main sector which 32 out of 41 respondents think that it has potential for their current and future business plans. “Financial Services” takes the second place both in current and future business potential for their companies. “Life Sciences and Health Care” industry replaces Retail as the third most attractive sector in terms of business potential in the next five years.

Q15 If you are past-Fast50/500 winner, what benefits have you received from being selected to the Deloitte Technology Fast50/500? (Please select all that apply)

62% of our respondents indicated that they had “Improved marketing and media recognition” as a result of being a past Deloitte Technology Fast50/500 winner. As other key benefits, 36 and 26 percent of the past Fast50/500 winner companies report that they had “Enhanced employee morale” and received “More attention from financial community”, respectively.

Conclusion

In 2014, our survey shows that the majority of the CEOs seem to be confident in sustaining their companies' high level of growth over the next 12 months. However, after two years of increase in the confidence levels (extremely confident + very confident), this year there is a decrease in the confidence levels from 88% in 2013 to 74%.

Predictions of the surveyed CEOs show that the most likely scenario for their companies over the next 12 months is organic growth. Business strategy is the most important factor for growth for the companies as they seek growth organically. Majority of the surveyed CEOs in the Fast50 Turkey Program believe that their workforce will grow by up to 50% in the next 12 months, underlying the importance of the talent concerns.

In 2014, "availability of talent", "rising costs" are the key threats in the market. 39% of the CEOs surveyed are expecting some form of a transaction, whether an M&A activity involving a strategic partner or an investment by a VC or Private Equity to alleviate funding issues. We expect the M&A activity in the sector to continue over the next 12 months.

Over the next five years, growth is expected to come from expansion in international markets and increased exports. In order to sustain high levels of growth, Turkish technology companies will need to formulate their globalization strategies as 39% of the CEOs indicated that international markets/ exports will be their primary target segments by 2018.

Also, this year, "Digitization and Mobility", "Better use of data through analytics" and "Visibility and access to real time information" are seen to be the top three trends that will drive technology investments in the next three years. In addition, "Technology, Media and Telecommunication" is indicated as the sector with the highest potential among technology companies. "Financial Services" takes the second place and "Life Science and Health Care" sector is indicated as the third most attractive sector.
